

APPLICATION BRIEF

Diagnostic Junction Box Powerful. Digital. Made Simple.

Built-in Kickstand

The iQUBE³ makes installation easier and more efficient with an integrated kickstand, providing technicians better access to the load cell connectors, the option board and other areas inside the enclosures.

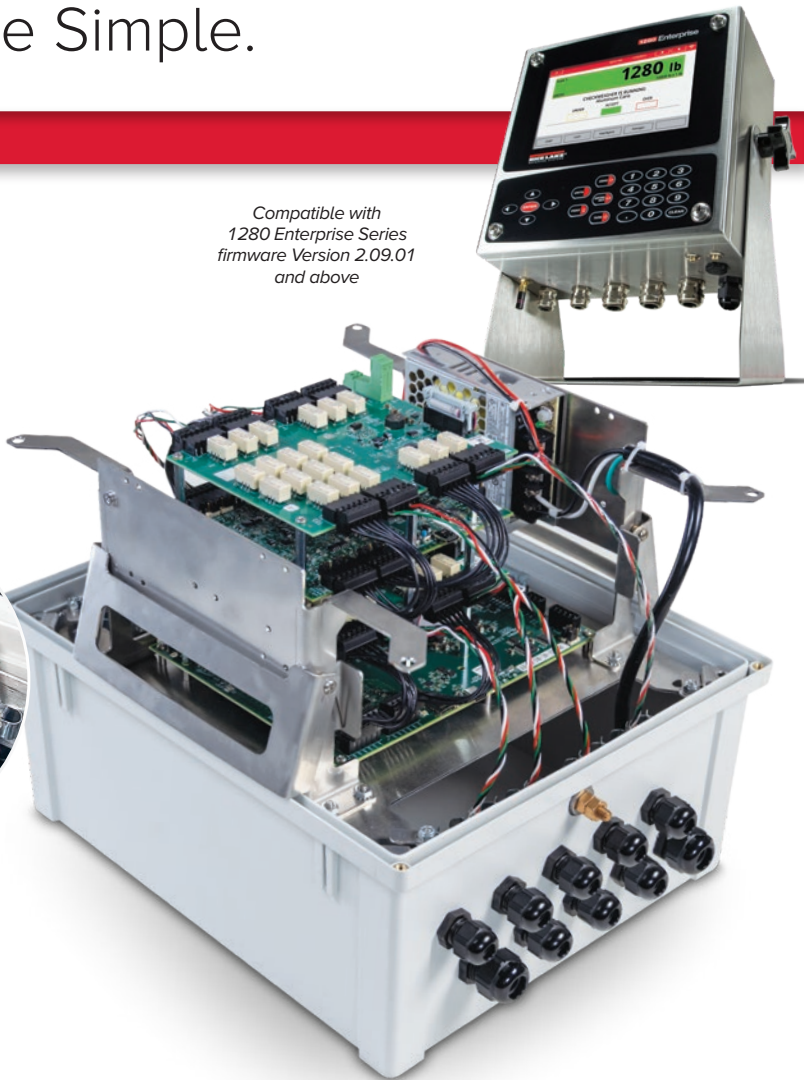

The kickstand is particularly useful for setups involving multiple processing boards.

Part of the unique kickstand design is an integrated grounding plane that simplifies what is often a tedious task. Simply strip back the load cell cable to expose the ground (foil or braid), fold it back over the insulation, and secure it in the compression clamp on the grounding plane.

Proper grounding is critical for electronic systems—ensuring safety, signal stability, and overall performance. Upgrade to a smarter, simpler experience.

Compatible with
1280 Enterprise Series
firmware Version 2.09.01
and above
