OFFLINE SAMPLING

RICE LAKE®
WEIGHING SYSTEMS

Offline Sampling

Reduce Profit Loss, Disputes and More

Less accurate systems can impact profits and brand perception by overfilling or underfilling containers, potentially short-selling customers or ruining products that require precise measurements. Myrias Offline Sampling assists in quality checks by collecting data from offline samples. Displays can also remind operators to evaluate packaging quality, such as label placement, so every product meets company standards.

By assisting with quality checks to deliver a consistent product, Myrias Offline Sampling establishes a positive brand image backed by integrity and reliable goods. It demonstrates a company's commitment to practicing due diligence and reduces the likelihood of disputes or complications.

Configuration - Product	Number of Products : 4		X

Product | Control | Fillers | Weighing — Details

Field	Value		
Product Name	Tea Bags 500g	Article Code	TB500 — New
Nominal Quantity	500	g — Average Weight	T1 485.00
Tare Weight (g)	25		T2 470.00
Fixed Allowance (g)	5		
Density (g/cc)			

Description: Empty Box=25g, Tea bag paper=5g

Meet Strict Compliance Regulations

In food, drink, cosmetic, pharmaceutical or chemical production facilities, products must be weighed throughout processing to meet strict standards. The weight of ingredients, fillings, packaging and final products can all be critical information to discover inaccuracies in production. Myrias Offline Sampling simplifies complex processes by providing all the data in the same place and notifying operators of inconsistencies.

Improve Quality Control and Traceability

The Myrias Offline Sampling module ensures every product meets quality standards, no matter how strict. With user IDs, lot codes and production batch numbers, each step is monitored, providing full traceability throughout processing. Operators can access live reports to easily track data throughout the day and print copies as needed.

"Myrias Offline Sampling simplifies complex processes by providing all the data in the same place and notifying operators of inconsistencies"

Myrias Core Software

Powerful Integrated Software Solutions

Myrias modular software provides full process control, monitoring and automation for a variety of business operations. By capturing and reporting weight data along every point of production, Myrias provides full product traceability.

Myrias software can help reduce costs, maintain product quality, provide material traceability and ensure regulatory compliance. Utilize Myrias to easily start and stop jobs, instantly access live reports and review KPI data. Reports can be generated in real-time locally or remotely for data access from multiple locations.

Because Myrias is a modular software platform, every facility can customize their software system to meet their unique processes. Facility managers can utilize modules including batching formulation, checkweighing, offline sampling and more to create the ideal system for their operations.

Myrias Core

Myrias software consists of a core database module and application-specific modules. The core module collects data, processes reports and controls additional similar functions. The Myrias core appropriate for your application is determined by the number of devices you'll be collecting data from.

Core Module	Device Support
Myrias Core 10	Up to 10 Devices
Myrias Core 20	Up to 20 Devices
Myrias Core 40	Up to 40 Devices
Myrias Core 120	Up to 120 Devices
Myrias Enterprise SQL Core Module	SQL Core for larger and more complex systems

Hardware Requirements

Myrias software can be used used with many different hardware devices and integrated with existing systems. It's also available in multiple languages and can be installed on a standalone Windows PC or run from a central server with network-connected workstations.

Service and Support

Our experts are available to provide onsite or remote installation, software training and phone support. Annual maintenance agreements are also available to help prevent unnecessary process downtime.

Myrias Reporting Functions

Myrias reporting is designed to provide accessible and customizable reports for process data. All reports are time- and date-stamped, and you can view data based on shifts, days or custom time periods. Track time- or event-based trends to help identify process areas that could be optimized. Data can be viewed in color histograms, trend graphs, charts or user-configurable tables. Myrias reports can also be easily saved and easily printed.
