

SLP-V Lite 3.x RELEASE NOTES

Important Note: If installing SLP-V Lite from a folder on a hard drive (rather than from the ScaleLink Pro install CD-ROM), the following restrictions apply to the path name of the folder:

1. The length of full path name must not exceed 93 characters.
2. The path must not include the "." character.

If you have a problem installing the software, try copying the installation to a folder with a shorter path name and try again.

Version 3.05a features & changes June 10, 2011

Use with the following firmware versions:

BC-4000 **E6010N / E6011N / E6023N / E6150A** or later

The following lists the main new functions added from the previous version of SLP-V Lite. Refer to the on-line Help for details of each function.

1. Fixed a problem where some label logo images were not sent to the AC-4000 and BC-4000. Modified operation to send all logos in a single data packet.
2. Added support to exclude corrupted logo data from the database when manually added and received from scale.
3. Modified to update the "File Path" in Database Settings when the path is changed during SLP-V Lite initial installation.
4. Added "Delete data before import? (PLU only)" option in Import from Text File.
5. Modified the Text Import to ignore the double quote marks (") at the beginning and end of the description fields when importing a Tab delimited ASCII text file.
6. Modified to automatically change the print unit X and Y coordinates when copying fields from one label format to another if they are outside the dimensions of the destination label format.
7. Modified to display "unknown" print unit on the label edit screen when label formats received from a scale have unsupported fields.
8. Changed following totals name:
 - PLU Production -> PLU Totals
 - Dept & Group Production -> Dept & Group Totals
9. Added ruled line to all reports.

Version 3.02b features & changes November 5, 2010

Use with the following firmware versions:

BC-4000 **E6010N / E6011N / E6023N** or later

Note: When upgrading SLP-V Lite from an earlier version, backup the database before uninstalling SLP-V Lite and then restore the database after installation.

The following lists the main new functions added from the previous version of SLP-V Lite. Refer to the on-line Help for details of each function.

1. Fixed a problem where some label logo images were not sent to the AC-4000 and BC-4000. Modified operation to send 100 records per block from 50 records.
2. Fixed a bug where SLP-V Lite service does not start when install on a 64-bit Windows OS.
3. Fixed a bug where an unexpected error occurs when "Edit Campaign Data" contains an undesignated Sales Mode.
4. Modified the following to extract totals in a Windows data format.
 - PLU Production
 - Daily Totals
 - Hourly Totals
5. Modified to display the correct icon in the About SLP-V window.

SLP-V Lite 3.x RELEASE NOTES

6. Fixed a bug where i-Support stopped working when the "Exit" button in Label Field Title List window was used.
7. Created "***STran.mdb" when install to maintain database compatibility with SLP-V.
8. Increased the maximum "Data Keep Period" for Totals to 457 days.

Version 3.00a features & changes June 22, 2010

Use with the following firmware versions:

BC-4000 **E6010N / E6011N / E6023N** or later

The following lists the main new functions added from the previous version of SLP-V Lite. Refer to the on-line Help for details of each function.

1. Added support for Windows 7.
 - Changed .Net Framework version to 3.5 SP1.
 - Excluded support for Windows 2000 and earlier versions.
 - Excluded support for SQL server 2000 (including MSDN).
 - Added information to the on-line Help - How to Install SLP-V.
2. Modified to install and run when Windows UAC is activated and the user is not defined as an administrator.
3. Modified the installation program to run when Windows DEP is activated.
4. Modified Database Settings to create the specified folder and database file when the folder does not exist.
5. Modified i-Support to run when the user is not defined as an administrator.
6. Changed the desktop icons to reflect updated version 3.x.
7. Fixed a bug in PLU search where the search field is always populated with item description text and reappears when clearing the field by deleting the characters.
8. Modified Add/Modified/Delete PLUs so that the Edit button does not open the Edit PLU window when no data exists.
9. Modified operation of the message list dialog box invoked by the "..." button for message fields in the PLU Edit window to set the initial focus to the currently selected message when more than 10 records exist.
10. Modified the display format for Department and Group in the PLU Edit window to "<number><:><text>". Example: "12 : Meat"
11. Fixed a bug in PLU edit where a "Save changes?" message appeared redundantly.
12. Fixed a bug in the Campaign function that caused an "Unhandled Exception" to occur when "Fixed Price" or "Price" was selected as the "New Mode".
13. Modified operation of the Delete Records dialog box to display a confirmation message after the "Delete Range" or "Delete All" button is pressed.
14. Fixed a bug in Text Export where an incorrect "Scale name" was used in the file name for Sales Transaction Data.
15. Added "Move file before importing?" and "Backup imported file?" options in Import from Text File.
16. Fixed a bug where exported data was not listed in ascending order by PLU No.
17. Added "Enable All Links", "Disable All Links", "Test All Links" buttons to Communication Center - Scale Status.
18. Modified to position the Report Center window in the center of the screen.
19. Fixed a bug where the data filtering function for production totals did not work.
20. Fixed a bug where the decimal position of "Price" in Totals (PLU Production Totals ...etc) could not be changed.
21. Modified scale the communication sequence to receive and delete each type of production totals data in turn.
22. Fixed a bug where the Hourly Total did not appear.

SLP-V Lite 3.x RELEASE NOTES

23. Modified the <Comms> - <Send to Scale...> - <Current Label Only> menu command to send the format data currently displayed in the label edit window.
24. Fixed a bug in the label edit window that prevented the status bar from being updated correctly when the TAB key was pressed to move from field to field.
25. Fixed a bug in the Label Unit List where Fixed Title descriptions did not appear when the unit type was Fixed Text.
26. Modified to show a "Save changes?" message for Label Format, Logo name and Field Titles.
27. Fixed a bug where .BMP data larger than 666 dots height could not be saved in Logo.
28. Removed the "Report" tab from Store Fields and Tray Fields in Setup Utility.

Version 2.15 features & changes April 30, 2009

Use with the following firmware versions:

BC-4000 **E6010J / E6011J / E6023J** or later

The following lists the main new functions added from the previous version of SLP-V Lite. Refer to the on-line Help for details of each function.

1. Fixed a bug causing the PLU Edit window to be cut off on the right side.
2. Fixed a bug where the PLU "Sell By Time" was treated as a time value rather than as minutes when the "Sell By Time Flag" = Relative.
3. Fixed a bug in the PLU Edit window where the incorrect icon appeared for PLUs included in a Campaign.
4. Fixed a bug in PLU search where the scroll wheel was disabled after adding a PLU.
5. Modified to show a "Save changes?" message for all Preset keys and Messages.
6. Modified the Campaign start time to 0:00 and end time to 23:59.
7. Fixed a bug in Send and Receive where the details of unsent data were not displayed when sending Price Changes.
8. Fixed a bug in the Help file that caused the message "This program cannot display the web page" to appear when the Index is selected.
9. Modified scale comms to prevent a communication error when receiving scale totals.
10. Improved the speed of production data retrieval.
11. Added a "Processing" message during totals retrieval in cases where the amount of data is large.
12. Fixed a bug in the Scale Error Log that showed an incorrect date format.
13. Modified the i-Support Scale Communication Status Monitor to not show "Not Connected" in the case where a communication error occurred but the scale is still connected.

Version 2.13e features & changes January 21, 2009

Use with the following firmware versions:

BC-4000 **E6010J / E6011J / E6023J** or later

The following lists the main new functions added from the previous version of SLP-V Lite. Refer to the on-line Help for details of each function.

1. Added database name display to the SLP-V Lite main screen and the title bar of each SLP-V Lite and i-Support window.
2. Fixed a bug in the PLU search function that caused no PLU search results to be displayed by retrieving full-word matches.
3. Modified the PLU List report to remove the "Active", "Inactive" and "Both" selection.

SLP-V Lite 3.x RELEASE NOTES

4. Fixed a bug in the Help file that caused the message "This program cannot display the web page" to appear when the Index is selected.
5. Fixed a bug in text importing of SLP 3.x tab-delimited data format.
6. Fixed a bug when receiving Nutrition data from the BC-4000.
7. Enabled "Save As" function.
8. Enabled Database Utilities.
9. Changed wording of Database Change message to "Restart SLP-V Lite when changing databases."
10. Enabled Font size 1:L54(10x6) for PLUs and Messages.
11. Modified the Default Fonts window to remove the horizontal scroll bar.
12. Fixed a bug that caused the Label Size settings to not work correctly.
13. Fixed a bug where no file extension (.set) was automatically added to the Setup file if the backup file name contained a decimal point (period).
14. Modified the description field in the PLU Production report to use the same format as the Edit PLU window. The text was previously shown with a fixed range making it appear different to the Edit PLU window.
15. Fixed a bug in the PLU Production and PLU List reports that caused the total page number to be larger than the current page number.
16. Modified the PLU Production Total report and PLU List to show descriptions as left-justified.
17. Added support to select "All line" or "1st line only" for product name in PLU Production Total.

Version 2.13a features & changes November 11, 2008

Use with the following firmware versions:

BC-4000 **E6010J / E6011J / E6023J** or later

The following lists the main new functions added from the previous version of SLP-V Lite.
Refer to the on-line Help for details of each function.

1. Initial release of SLP-V Lite for BC-4000 Series.
