Solutions for Harsh Environments

In the waste industry, equipment must be durable. Chemicals, rodents, weather conditions and constant use put wear and tear on weighing solutions. Rice Lake offers robust scales and equipment that thrive in these demanding applications.

Truck Scale Kiosks Enhance Safety

Rice Lake's truck scale kiosks conveniently print formattable tickets, with optional RFID readers to automatically capture truck and trailer IDs. Bright, large touchscreens relay information clearly, even in direct sunlight, and feature customizable programming with 1280 Enterprise™ Series or 920i® indicators. Available in a stainless steel or mild steel enclosure, truck scale kiosks withstand harsh environments and keep operations moving no matter the conditions.

Toughest Truck Scales on Earth®

Rice Lake's SURVIVOR® OTR truck scales are designed to last. With self-seating p-brackets for easy installation and top-access to load cells for maintenance, SURVIVOR truck scales simplify setup and maintenance. All cables are completely enclosed in steel conduit to eliminate pest damage, and truck scale decks are built with steel or concrete to suit application needs.

Displays That Beat Sun Glare

Rice Lake offers bright, colored LED displays, such as the LaserLight3™ remote display, with non-glare filtered lenses so truck drivers can read results even in direct sunlight. High-intensity visuals feature digits up to five inches tall for displaying weights or messages directly to drivers.

Unbeatable In-motion Efficiency

The SURVIVOR OTR-IMS is a single-draft, Legal for Trade in-motion weighing solution. Improve processing speeds by weighing trucks without stopping, eliminating idle time. Rice Lake's in-motion truck scale system includes the 1280 Enterprise™ Series weight indicator and LaserLight3™ remote display to optimize operations. Install a SURVIVOR OTR-IMS system into a new facility, or integrate it with a preexisting SURVIVOR truck scale.

High-speed Junction Boxes

The iQUBE® series digital diagnostic junction box digitally monitors and communicates load cell performance 24/7, ensuring accurate weighments and diagnostics. If there are malfunctions, Rice Lake's iQUBE3 compensates for failing load cells with an emulation feature until repairs are made. Open protocol allows it to be interfaced with most serial hosts, providing flexibility for different applications.

4

Train Car Weighing

Compact Train Car Weighing

The RailBoss® rail scale is an efficient, compact solution for weighing train cars. The RailBoss system is a series of 5-foot, 10-inch rail sections specially fitted with strain gauges to accurately measure the total gross weight of rail cars.

The full-draft system consists of eight RailBoss sections, designed to weigh an entire rail car in a single draft. The double-draft RailBoss system uses four sections and weighs each end of the car separately, which is ideal for operations with a wide range of rail car sizes. For high-volume applications requiring Legal for Trade weights, the SURVIVOR RT rail and truck combination scale provides Legal for Trade weights of vehicles and train cars.

OnTrak®

Simplify With OnTrak

Monitor trucks in real-time with OnTrak Enterprise software to simplify management. Used with Rice Lake's Automated Ticketing Kiosks, OnTrak collects data on trucks passing in and out of facilities so operators can view, print or export data. Easily install OnTrak software into existing operations with Ethernet connectivity and Windows® 10 compatibility.

RICE LAKE SURVIVOR[®] TOUGHEST TRUCK SCALES ON EARTH[™]

Powerful Indicators and Controllers

Rice Lake's indicators simplify processes, allowing operators to monitor scales and view results. Several indicators feature a customizable display to show what matters most in your application. View operations from any network device by selecting an indicator with a built-in web server for remote access.

Portable Axle Scales

Portable Axle Scales

Rice Lake offers a range of axle scales that can be moved between sites to maximize use. These non-Legal for Trade solutions weigh trucks one axle at a time. No matter the conditions, Rice Lake's axle scales are built to last.

Onboard Weighing

Weigh Shipments Onboard

Rice Lake has multiple onboard weighing solutions to minimize time spent weighing with trucks, semi-trailers and roll-off dump trucks. The Loadrunner[®] dump truck systems kit is a quick way to obtain weights by lifting the dump body a few inches off the frame and measuring the incline with an inclinometer. For Legal for Trade applications, the TradeRoute[®] HL Series provides accurate weights and includes the 920i[®] Weigh Center with printer.
