## Collect and Report Truck Scale Data

# Make Truck Scale Data Work for You

OnTrak Enterprise is an essential data management tool for truck scale operations. With its web browser interface, the software allows access from multiple PCs and handheld devices throughout a facility or even within a truck.

#### Efficient User Access

There are four different types of access roles: administrator, super-user, user and driver. Different operator types allow for protection of business information while still providing needed access for different operators.

#### **Comprehensive Database**

Built-in databases store information such as charges, discounts, jobs, haulers, products and more. Operators are able to view inbound or outbound transactions and create a custom ticket when a truck weighs out.

## Ticket Configuration

An easy interface enables tickets to be easily customized to the operator's own process. The Tickets page lists the current configuration and provides editing functionality to both inbound and outbound shipping ticket format, as well as inbound and outbound receiving ticket format.

## Data Integration

REST APIs are built into the software to send and retrieve data between the software and your existing system. Transaction tables can also be exported as an XML file for use in other software such as Excel or an accounting software—wherever the data is needed.

## Load Stack

Having multiple trucks that have weighed-in also waiting to weigh-out can be stressful. View all trucks at once and see trends such as a busy time of day and scale usage, and use that information to determine if another truck scale or other accommodations are needed.

### Reporting

Generate reports based on various data contained within the system, such as basic reports, product usage reports and transaction summary reports.

#### Options to Customize a Solution for Your Application

• •	
	J

The optional **1280** Enterprise kiosk provides an easy user interface for drivers to interact with. An optional intercom further steamlines communication. Drivers can check-in, weigh-in and -out, and print tickets without exiting the truck, increasing safety.

By automating everything from point-of-sale to account management, this system virtually eliminates transaction errors.

**Image Capturing:** Photos of the truck, load, driver or any combination can be stored in the transaction database.\*

**REST API:** Construct API Client software to interface OnTrak Enterprise with existing software applications.

**License Plate Recognition:** Trucks are identified by their license plate without using HID cards.\*

\*Requires Microsoft® SQL Server Standard or better

TRUCK SCALE DATA MANAGEMENT

#### **STANDARD FEATURES**

- Comprehensive transaction management
- Unlimited charge and discount amounts per product
- Calculates tax
- Ship or Receive mode for each transaction
- Assign one of four security levels to each user
- Exclusive databases for customer, hauler, truck, product, job, price/discount, tax and transaction
- Filter reports to view relevant information
- Customize printed tickets
- Back up and restore via included database maintenance utility
- Software supports unlimited number of scales, number of scales supported is dependent on user's hardware
- Website for remote access, systems integration and data monitoring (SSL certificate required for publishing website to Internet)

OPTIONS

# 1 Kiosk interface: additional hardware required with customization available Image: Contract of the customic of the cust

3
