

A&D INSPECTION

# AD-4971 SERIES METAL DETECTOR

# AD-4971 SERIES

Provides high sensitivity detection with simple and easy operation and contributes to the delivery of safe products to your customers.

» **High sensitivity detection**

You can conduct high sensitivity detection with simple and easy operation. The optimal sensitivity setting can be set through the auto sensitivity settings. The phase tracking function enables minimization of product phase and allows constant high sensitivity inspection.

» **7 inch color touch panel**

The display utilizes a high visibility touch panel color LCD with friendly Graphic User Interface (audio guidance support function included).

» **Image import from USB**

Product images can be quickly uploaded to the metal detector from a USB memory, making product identification and upload fast and simple.

USB memory (sold separately)

» **Stores up to 1000 products**

Products can be divided into 10 different groups with up to 100 products able to be recorded within each group.

» **IP65**

Protected from dust and water to IP65 standards. Hygienic design with the entire system washable.

## Display Examples

Normal Display

Bar Graph Display

Lissajous Display

» **Modbus® communication**

Equipped with Modbus RTU/Modbus TCP as standard. With Modbus communication, seamless connection can be easily achieved.

Operations such as stopping and starting inspection, collecting data and changing product can all be set from an external device.

# METAL DETECTOR

» History function

## Operational History

The history of configuration changes can be recorded and displayed. Suitable for use in HACCP programs along with the weighing history function.

Users can be registered and their scope of permitted operations controlled according to 4 management levels.

- [ Operator ]
- [ Supervisor ]
- [ Quality Manager ]
- [ Administrator ]

By assigning each user to the appropriate level of access, inadvertent operations can be avoided. \*

\* "Operator" is set when the power is turned on.

## Inspection History

Inspection results, such as date, time, group, and product codes and inspection results, can be recorded to USB memory during inspection.

2013/07/31	12:30:00	01-001	PASS
2013/07/31	12:30:05	01-001	PASS

2013/07/31	12:30:45	01-001	PASS
2013/07/31	12:30:50	01-001	FAIL 1

Date Time Code Detection result

» Data output to USB

All inspection data (csv), operation history (csv), inspection summary data (PDF) and operation check results (PDF) can be outputted to USB memory.

\* USB memory is not included. Please prepare separately.

Graph printing to a printer

Inspection results and operation check results can be outputted to a PostScript printer via Ethernet.

## Basic Principle of Metal Detection

A sensor head of an electromagnetic induction type metal detector consists of a transmitter coil and two receiver coils that are equally spaced and are differentially connected. A transmitter coil broadcasts a radio frequency signal and generates an electromagnetic field between the transmitter coil and receiver coils. When no contaminant exists, both receiver coils receive an equal amount of magnetic flux and differential signal output is balanced at zero. The magnetic flux balance is disturbed and creates a differential output signal when a contaminant passes through the aperture. Metal detectors detect metal contaminants by processing this differential output signal.

# AD-4971 Series Specifications

**AD-4971-3510**

Aperture size:  
350 mm (W) x 100 mm (H)  
13.7 in (W) x 3.9 in (H)  
(Pass height 80 mm / 3.1 in)  
Detection sensitivity \*  
Fe: Ø0.3 mm, SUS: Ø 0.8 mm

**AD-4971-3517**

Aperture size:  
350 mm (W) x 170 mm (H)  
13.7 in (W) x 6.6 in (H)  
(Pass height 150 mm / 5.9 in)  
Detection sensitivity \*  
Fe: Ø0.5 mm, SUS: Ø 1.0 mm

**AD-4971-3525**

Aperture size:  
350 mm (W) x 250 mm (H)  
13.7 in (W) x 9.8 in (H)  
(Pass height 230 mm / 9 in)  
Detection sensitivity \*  
Fe: Ø0.7 mm, SUS: Ø 1.5 mm

**AD-4971-4517**

Aperture size:  
450 mm (W) x 170 mm (H)  
17.7 in (W) x 6.7 in (H)  
(Pass height 150 mm / 5.9 in)  
Detection sensitivity \*  
Fe: Ø0.5 mm, SUS: Ø 1.0 mm

**AD-4971-4525**

Aperture size:  
450 mm (W) x 250 mm (H)  
17.7 in (W) x 9.8 in (H)  
(Pass height 230 mm / 9 in)  
Detection sensitivity \*  
Fe: Ø0.7 mm, SUS: Ø 1.5 mm

\*Optional tower lights are illustrated in blue.

\* Detection sensitivity will change depending on product and environmental conditions. Please prepare a φ4-7mm power cable.

## Common Specifications for AD-4971 Series

Transport medium	Urethane belt
Conveyor belt speed	10 ~ 60 m/min   32.8 ~ 196.8 ft/min
Display	7 inch touch panel color display
Operation method	Touch panel (WVGA), key switch
Number of recorded items	1,000 items
Communication functions	Modbus TCP / Modbus RTU / TCP/IP (PostScript Printer)
	USB (for USB memory, data storage, image import use)
External input	Non-voltage contact input 4 points
External output	Relay outut 8 points
Dust / water resistance specifications	IP65 compliant
Operation temperature / humidity range	0 ~ 40°C / 32 ~ 104°F humidity below 85% (with no condensation)
Power supply	Single phase AC100V -240V (+10% / -15%), 50/60Hz 180 VA
Material	Sensor head: Stainless steel
	Display: ABS resin
	Conveyor unit: Phenolic resin, stainless steel, Aluminum (alumite treatment)
	Control box: ABS resin / optional stainless steel Base unit: Stainless steel

## Operating precautions

- Decide where in the production process to install the metal detector by assessing the risk of metal contamination.
  - » For raw materials with a lot of metal contaminants, install a metal detector before processing begins.
  - » For products packed in aluminum foil packages, install a metal detector before the packaging process.
  - » For frozen products, install a metal detector after freezing (make sure the product is frozen to the core and it's below -18°C).
- Production flow of horizontally long or oblique orientation is preferable.
- Keep inspected products as small as possible.
- Keep product temperature constant.
- Installing the metal detector in an area with little vibration is advised.
- Dedicated 100-240V wiring with low noise is advised.
- Make sure to ground the metal detector.
- Remove vibrating or shifting metals near the sensor head.
- Make sure thta ground loops are not created by nearby equipment.
- Please prepare a Ø4-7 mm power cable.
